1.1 Sustainable Development (SD)

Definitions of Sustainability

Sustainable Development (SD)

Meeting the needs of the present generation without compromising the ability of future generations to meet their own needs.

-- Brundtland Commission, 1987 –

Sustainability

The possibility that human and other forms of life on earth will flourish forever.

-- John Ehrenfeld, Professor Emeritus. MIT –

Sustainable Development (SD)

Enough - for all – forever.

-- African Delegate to Johannesburg (Rio+10) --

Klaus Erharter
Florian Dörfler

1.1 Sustainable Development

Earth Summit 2002 – Johannesburg declaration

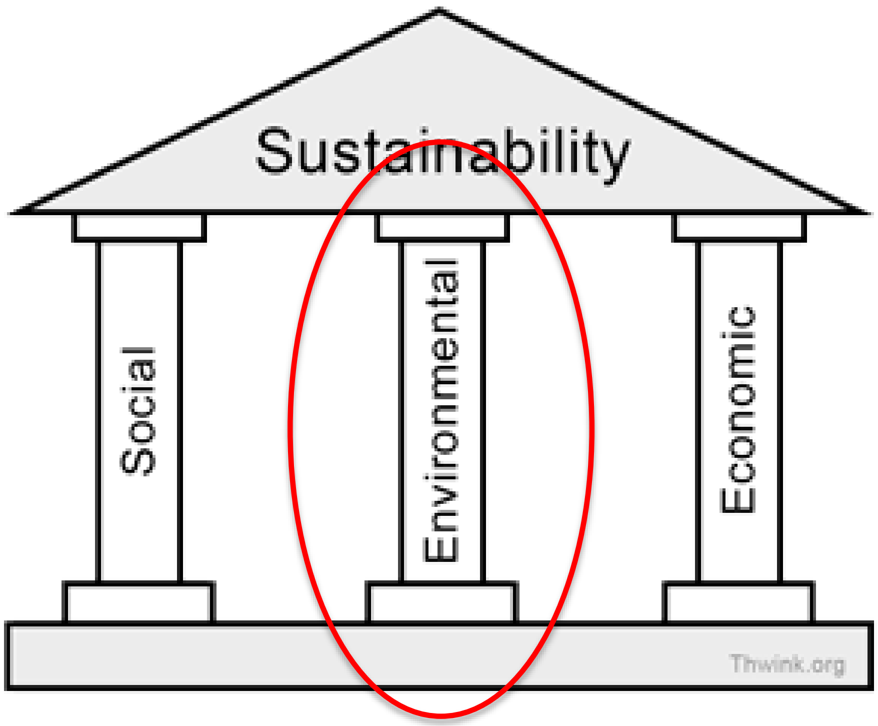
„…accordingly, we assume a collective responsibility to advance and strengthen the interdependent and mutually reinforcing pillars of sustainable development

- Economic development,
- Social development and
- Environmental protection

at the local, national and global levels.“

Klaus Erharter
Florian Dörfler

1.2 Three pillars model



Klaus Erharter
Florian Dörfler

1.3 Lifecyle Assessment (LCA)

- **Life Cycle Assessment (LCA) according to ISO14044 & ISO14040**

- Environmental Product Declaration (EPD) according to ISO14025
- European Lifecycle Database (ELCD)
- Product Environment Footprint (PEF)
- Energy Efficient Buildings (EeBGuide)
- …

Global Warming Potential:

$$GWP = material\ weight \cdot Factor\ GWPsteel\ sheet$$

Example

$$GWP = 42{,}76\ kg\ steel\ sheet \cdot 0{,}7509\ \frac{kgCO_2equivalent}{kg} = 32{,}11\ kg\ CO_2equivalent$$

Klaus Erharter
Florian Dörfler

4.2 Calculation model – production of components

b) Production of ropeway components

Denomination	Value	Unit	Data source
Production hours Machining	1704	h	Production planning LEITNER ropeways
Production hours Welding	3220	h	
Production hours Assembling	1738	h	
Production hours Others	1057	h	
El. power Machining	70	kW	
El. power Welding	50	kW	
El. power Assembling	5	kW	
El. power Others	40	kW	

GWP calculated based on energy mix of production plants

(Leitner plants ~100% renewable energy sources)

Klaus Erharter
Florian Dörfler

Klaus Erharter
Florian Dörfler

4.2 Calculation model – operation of the ropeway

d) Operation of the ropeway

Calculation Global warming potential (year 2015)

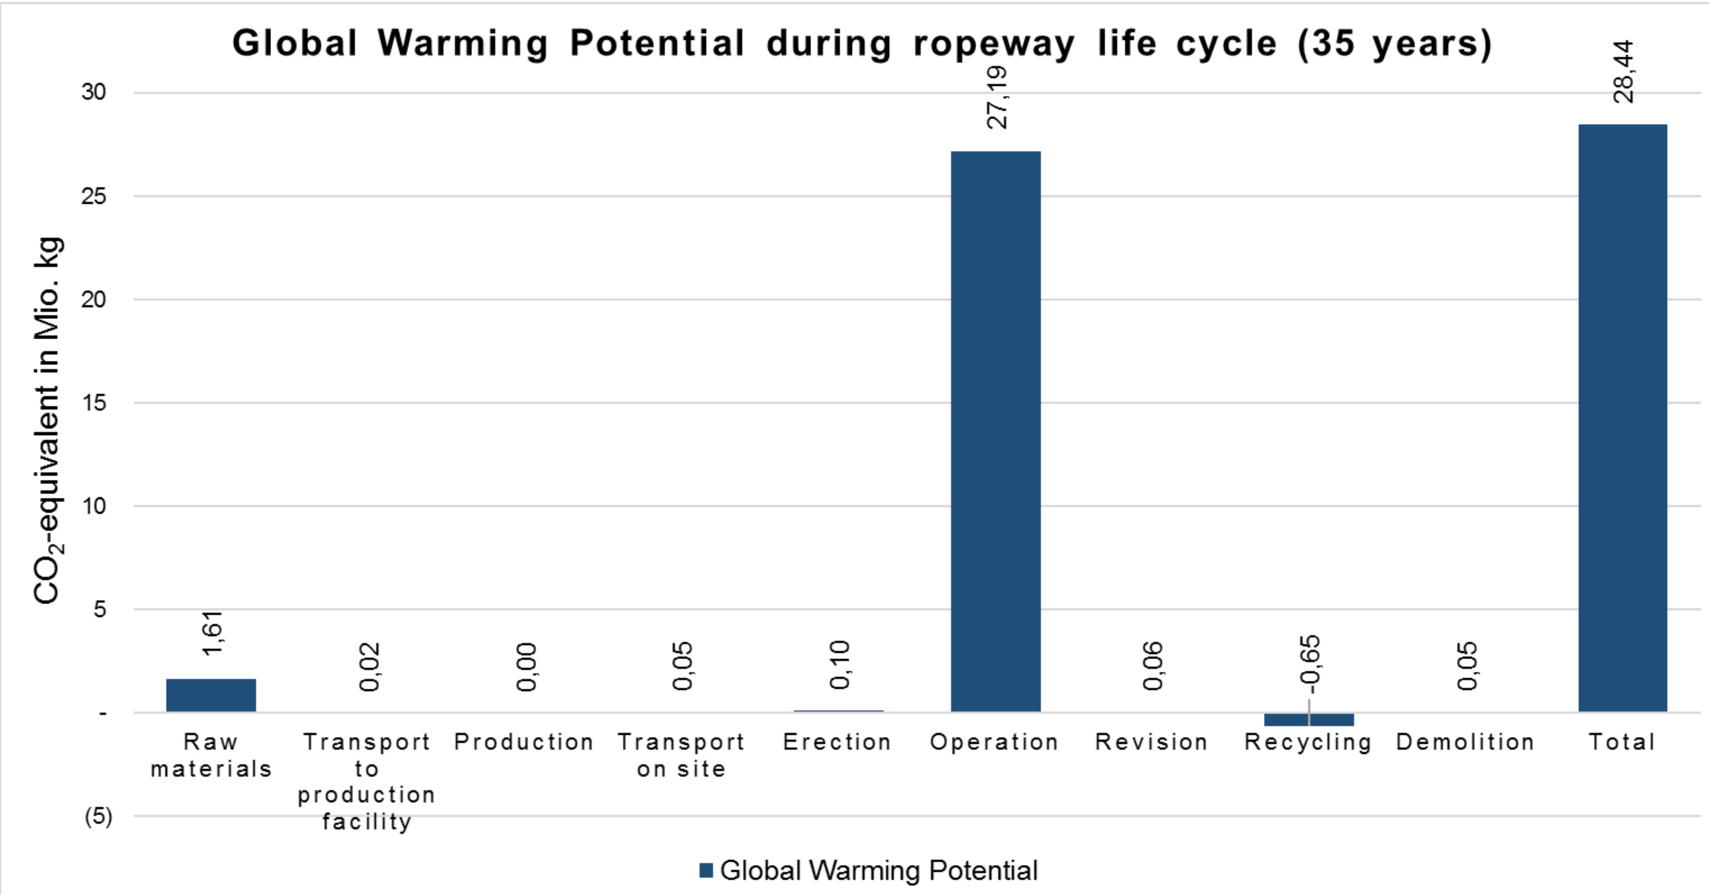
$$GWP = energy\ consumption\ p.y.\cdot Factor\ GWP\ (energy\ mix\ DE\ 2015)$$

Example

$$GWP = 2.100.467\,\frac{kWh}{y}\cdot 0{,}549\,\frac{kgCO_2equivalent}{kg} = 1{,}153\,\frac{Mio.kgCO_2equivalent}{y}$$

Klaus Erharter
Florian Dörfler

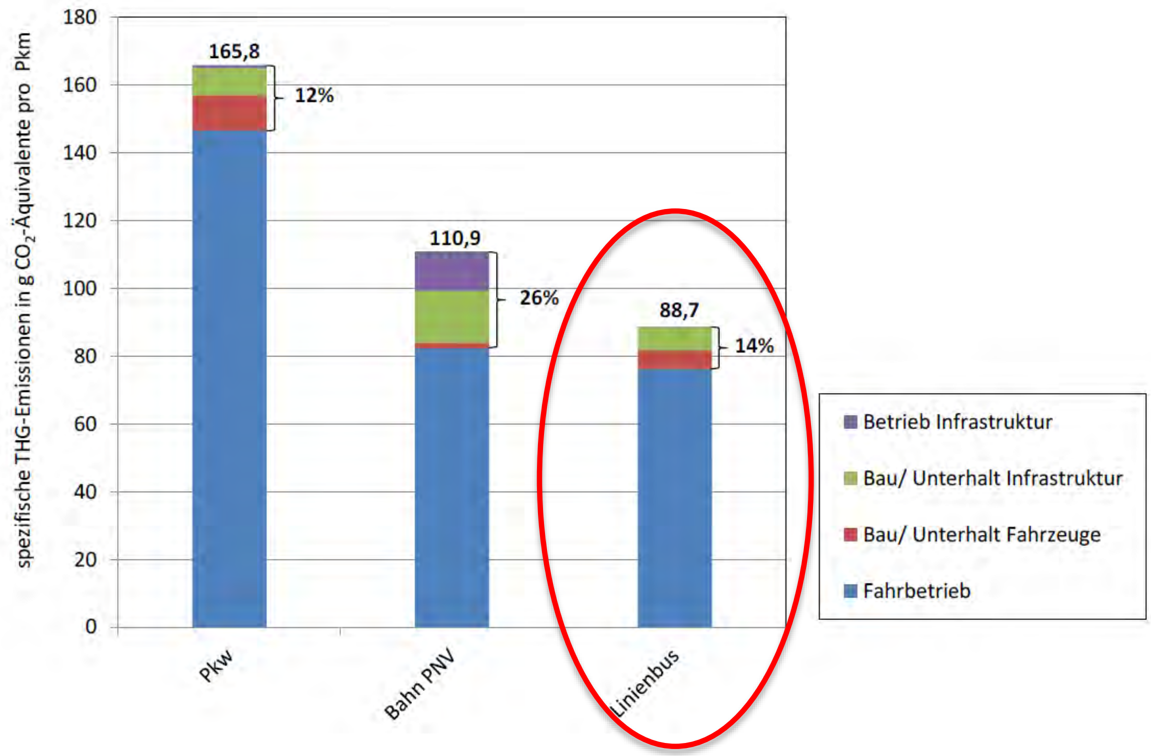
4.3 Results



Klaus Erharter
Florian Dörfler

5.1 Diesel Bus system

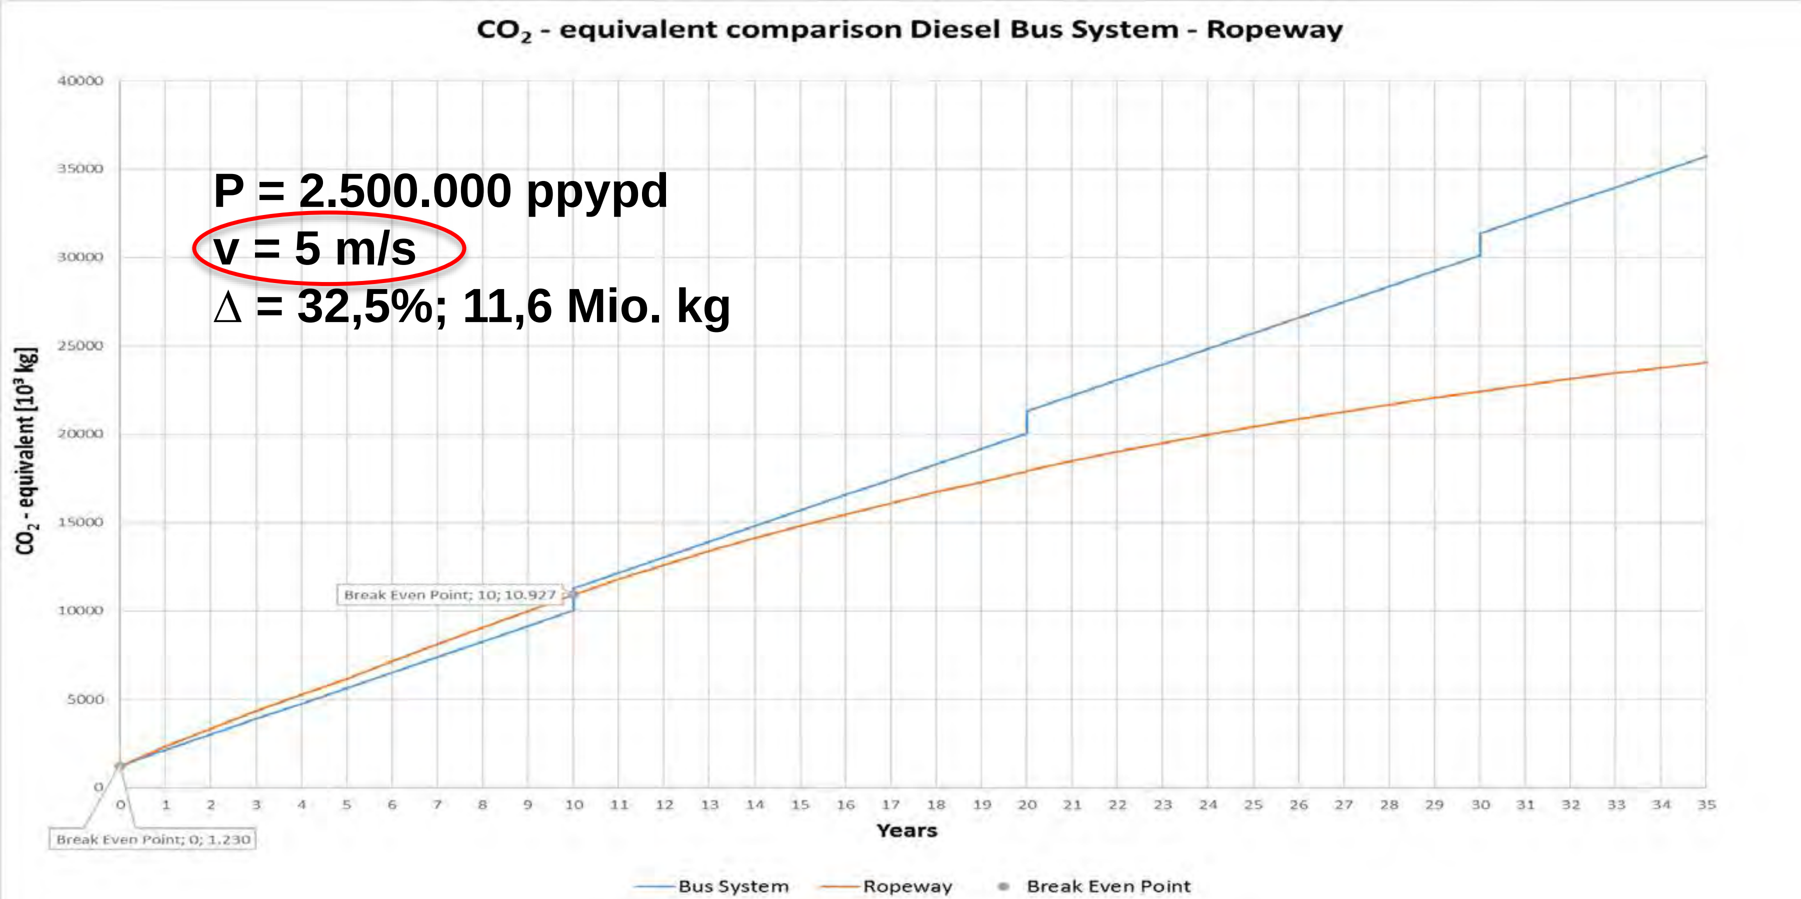
- **Use of a study carried out by the Umweltbundesamt - Germany**



Average utilisation Bus system: 20%; Life time Bus system 10 years

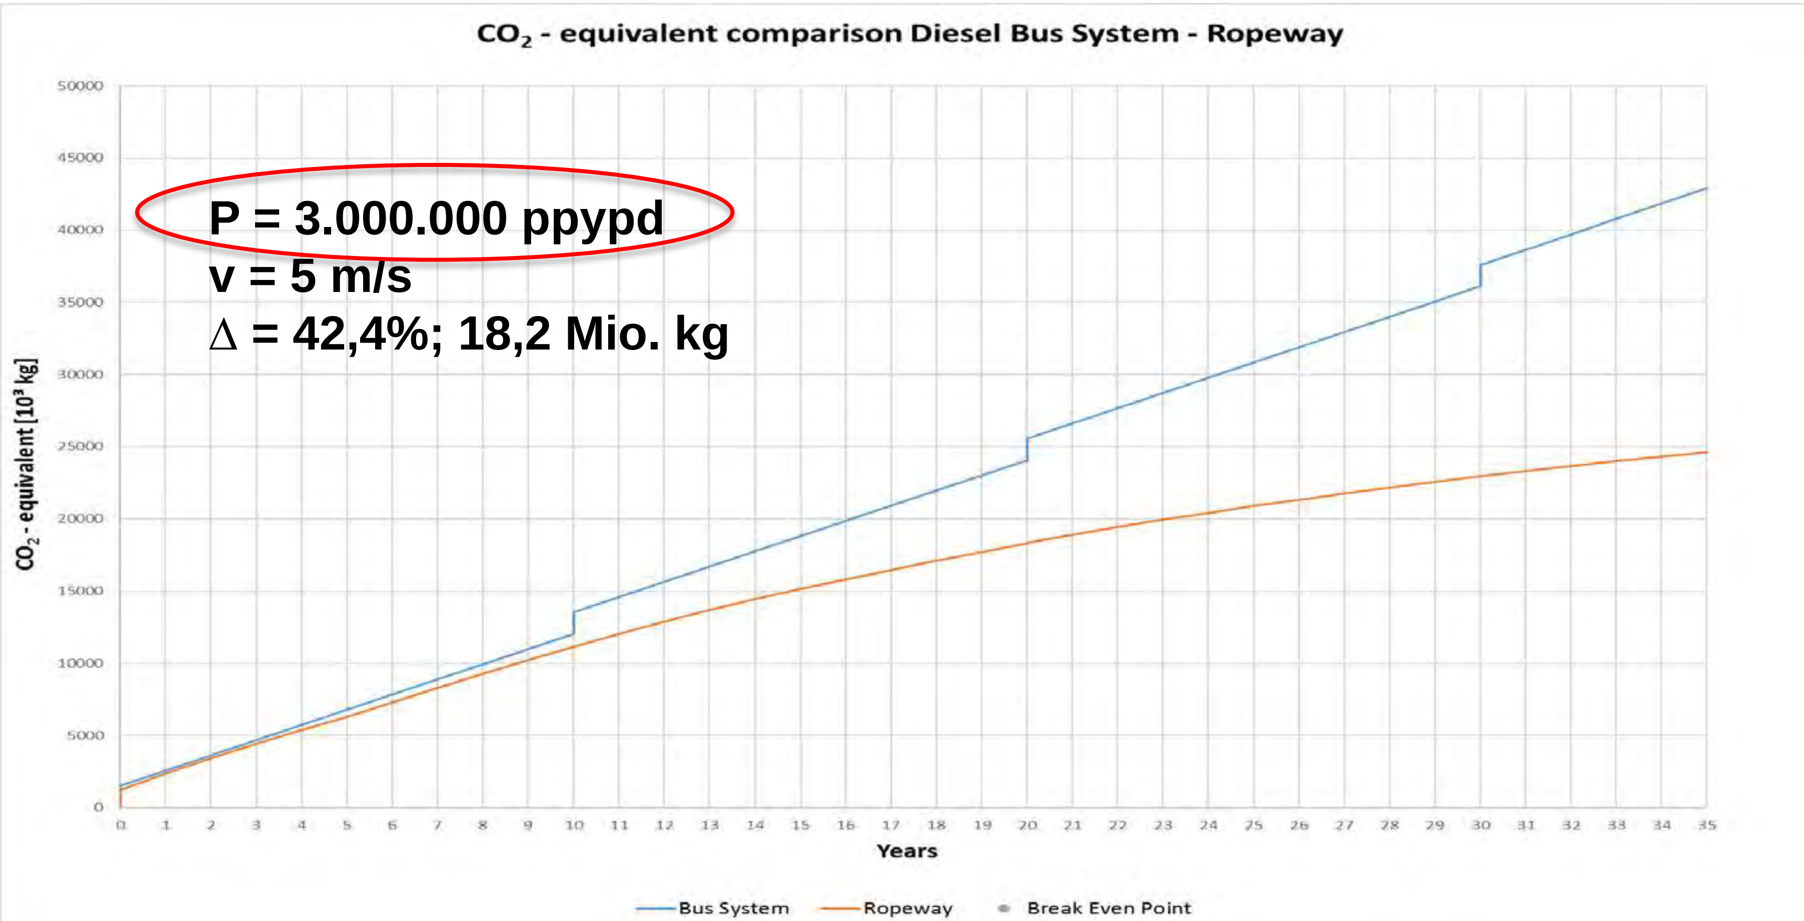
Klaus Erharter
Florian Dörfler

5.2 Example Yenimahalle – energy mix forecast DE



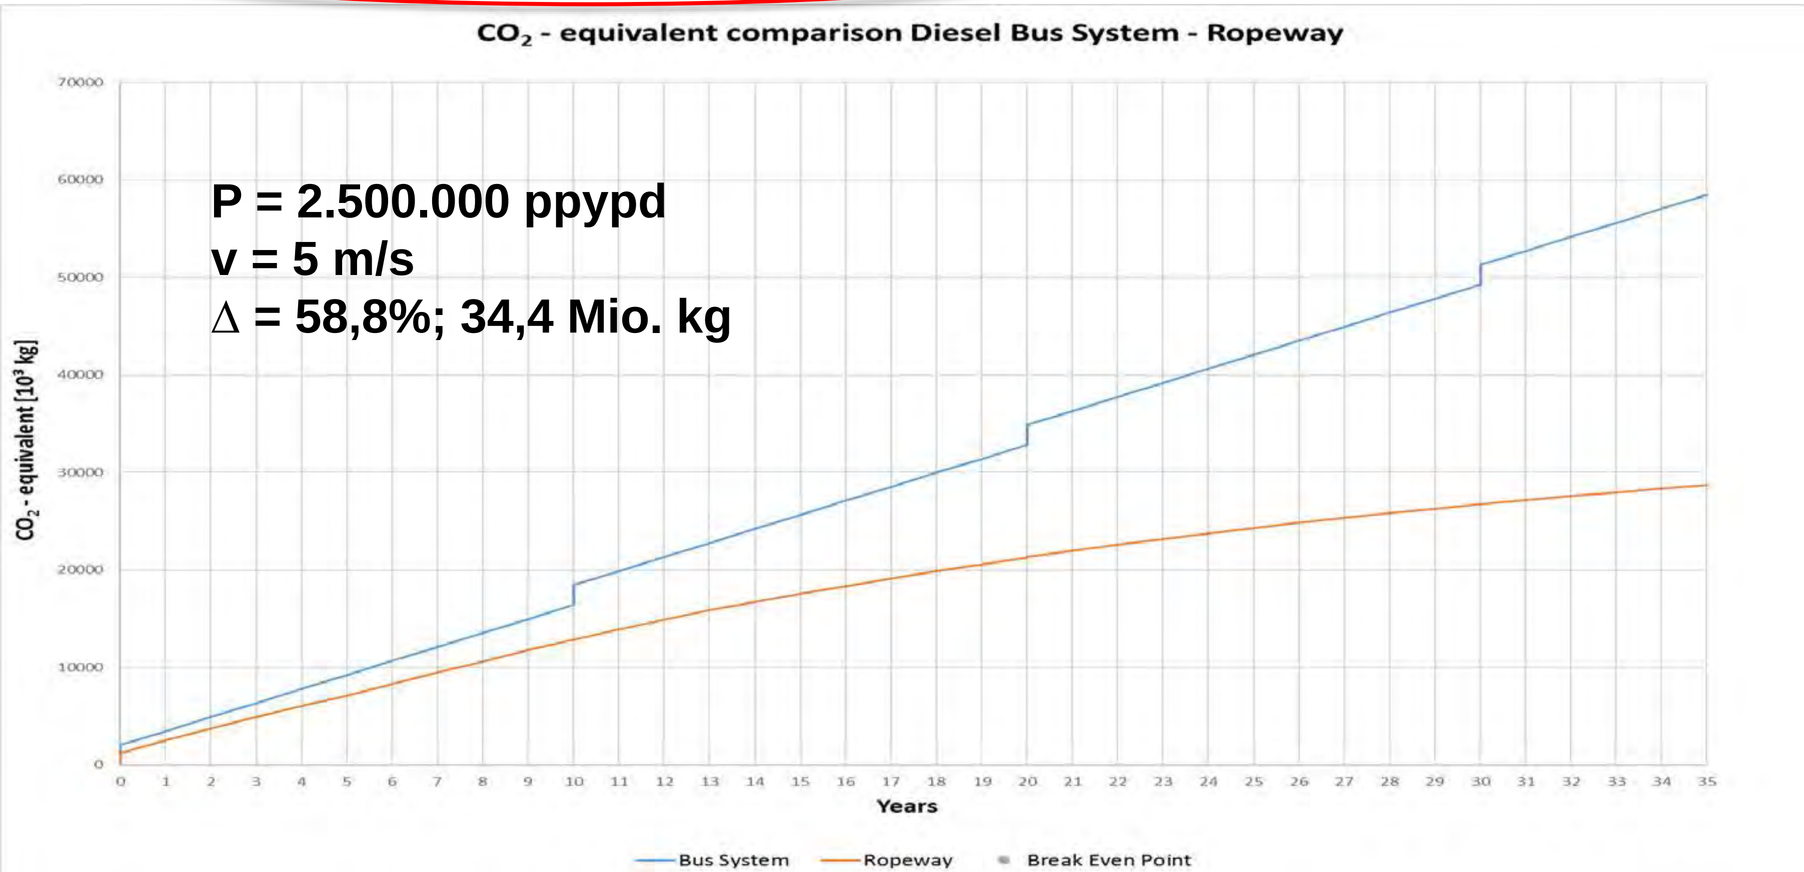
Klaus Erharter
Florian Dörfler

5.3 Example Yenimahalle – energy mix forecast DE



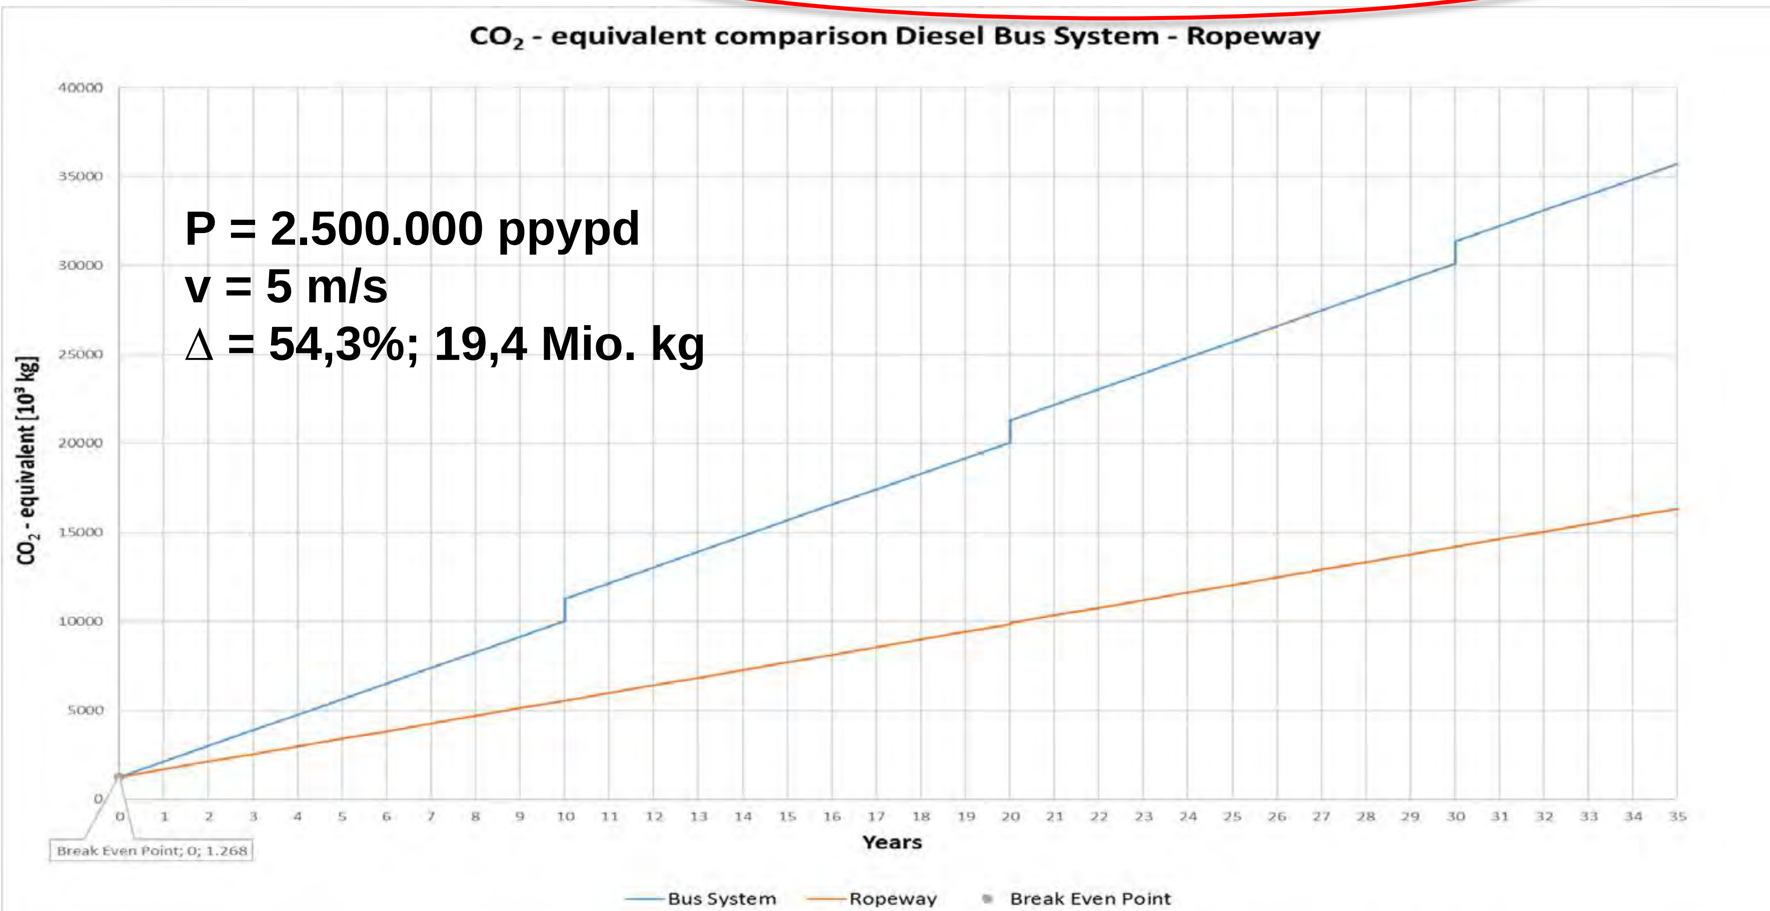
Klaus Erharter
Florian Dörfler

5.4 Example Yenimahalle – energy mix forecast DE (length Bus line = 2x length Ropeway line)



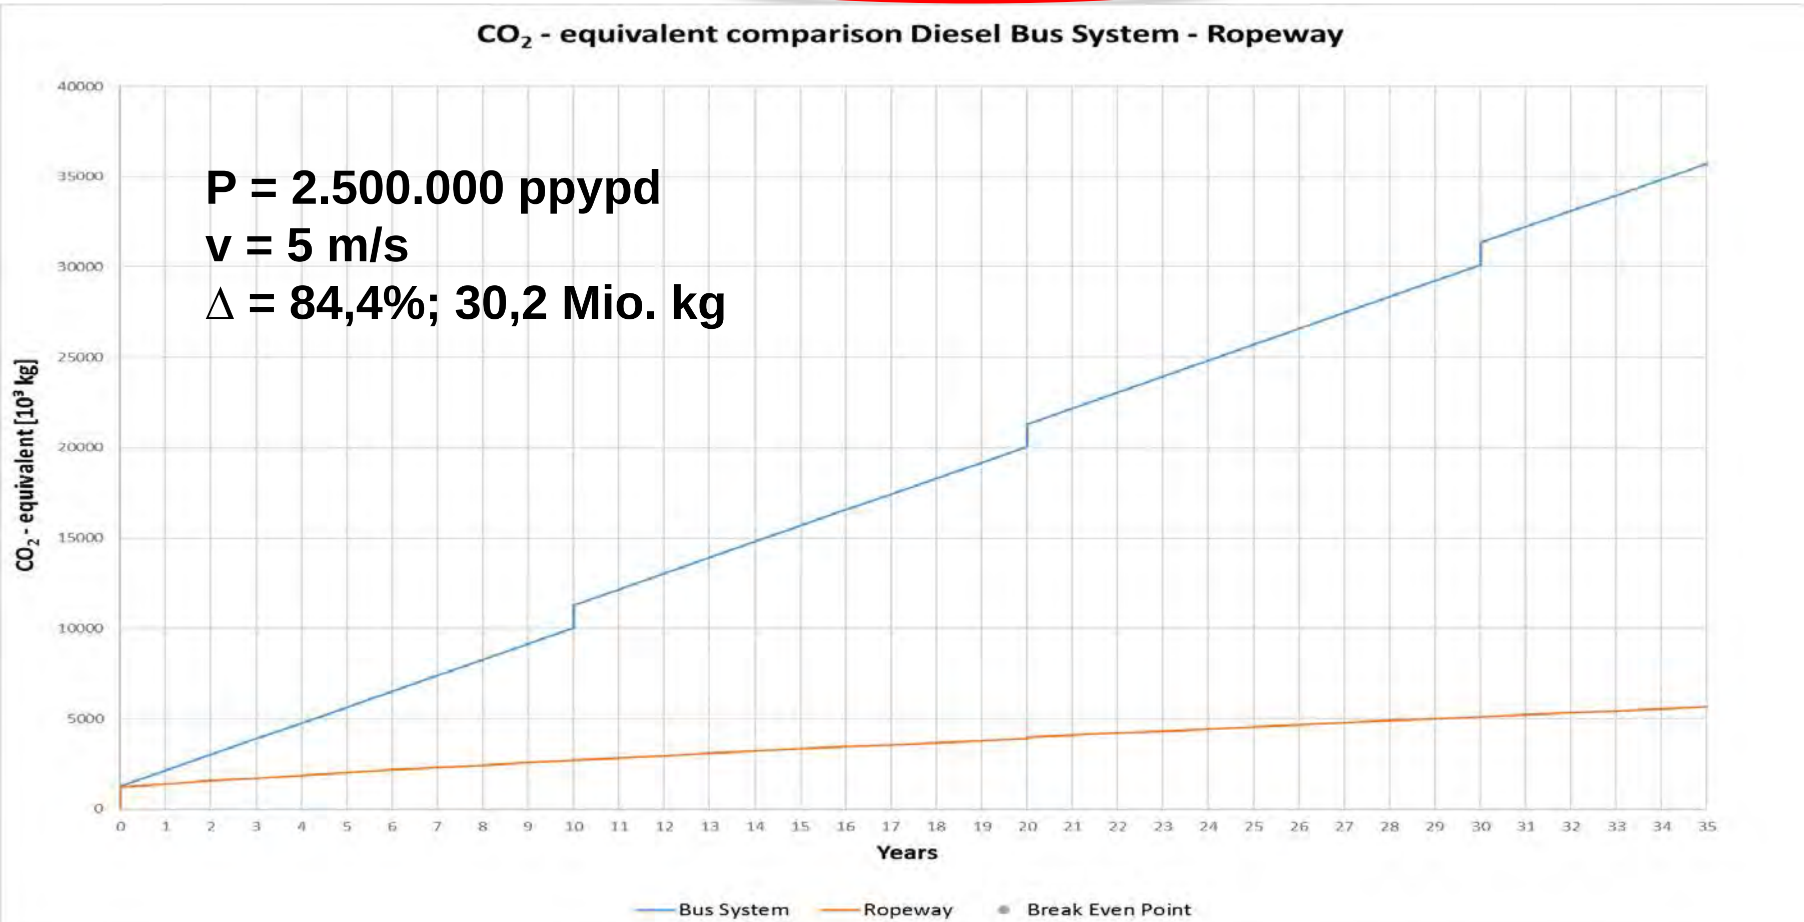
Klaus Erharter
Florian Dörfler

5.5 Example Yenimahalle – energy mix Austria 2015 (0,231 kg CO_2/kWh)



Klaus Erharter
Florian Dörfler

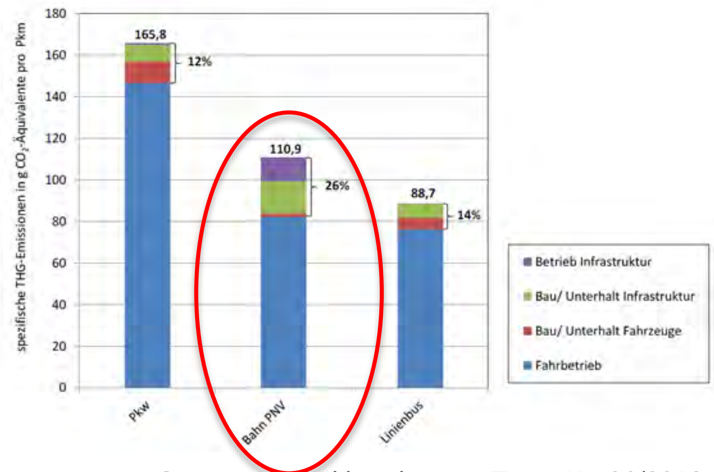
5.6 Example Yenimahalle – green electricity forecast DE



Klaus Erharter
Florian Dörfler

5.7 Future scenario „pure electromobility“:

- Electromobility by battery powered busses
- Power generation by green electricity

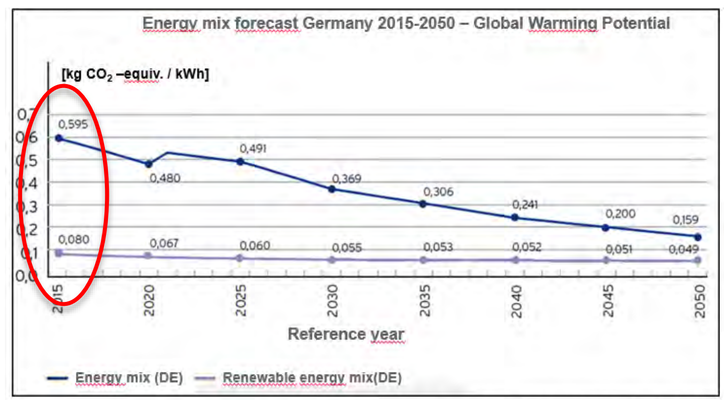


Source: Umweltbundesamt, Texte Nr. 96/2013

Hypothesis: reduction CO_2 emissions bus proportional to energy production ratio

Electric tram (today) = 81 g CO_2 / km p

Electric Bus (tomorrow) = 81 * (0,080/0,595)
= 10,9 g CO_2 / km p

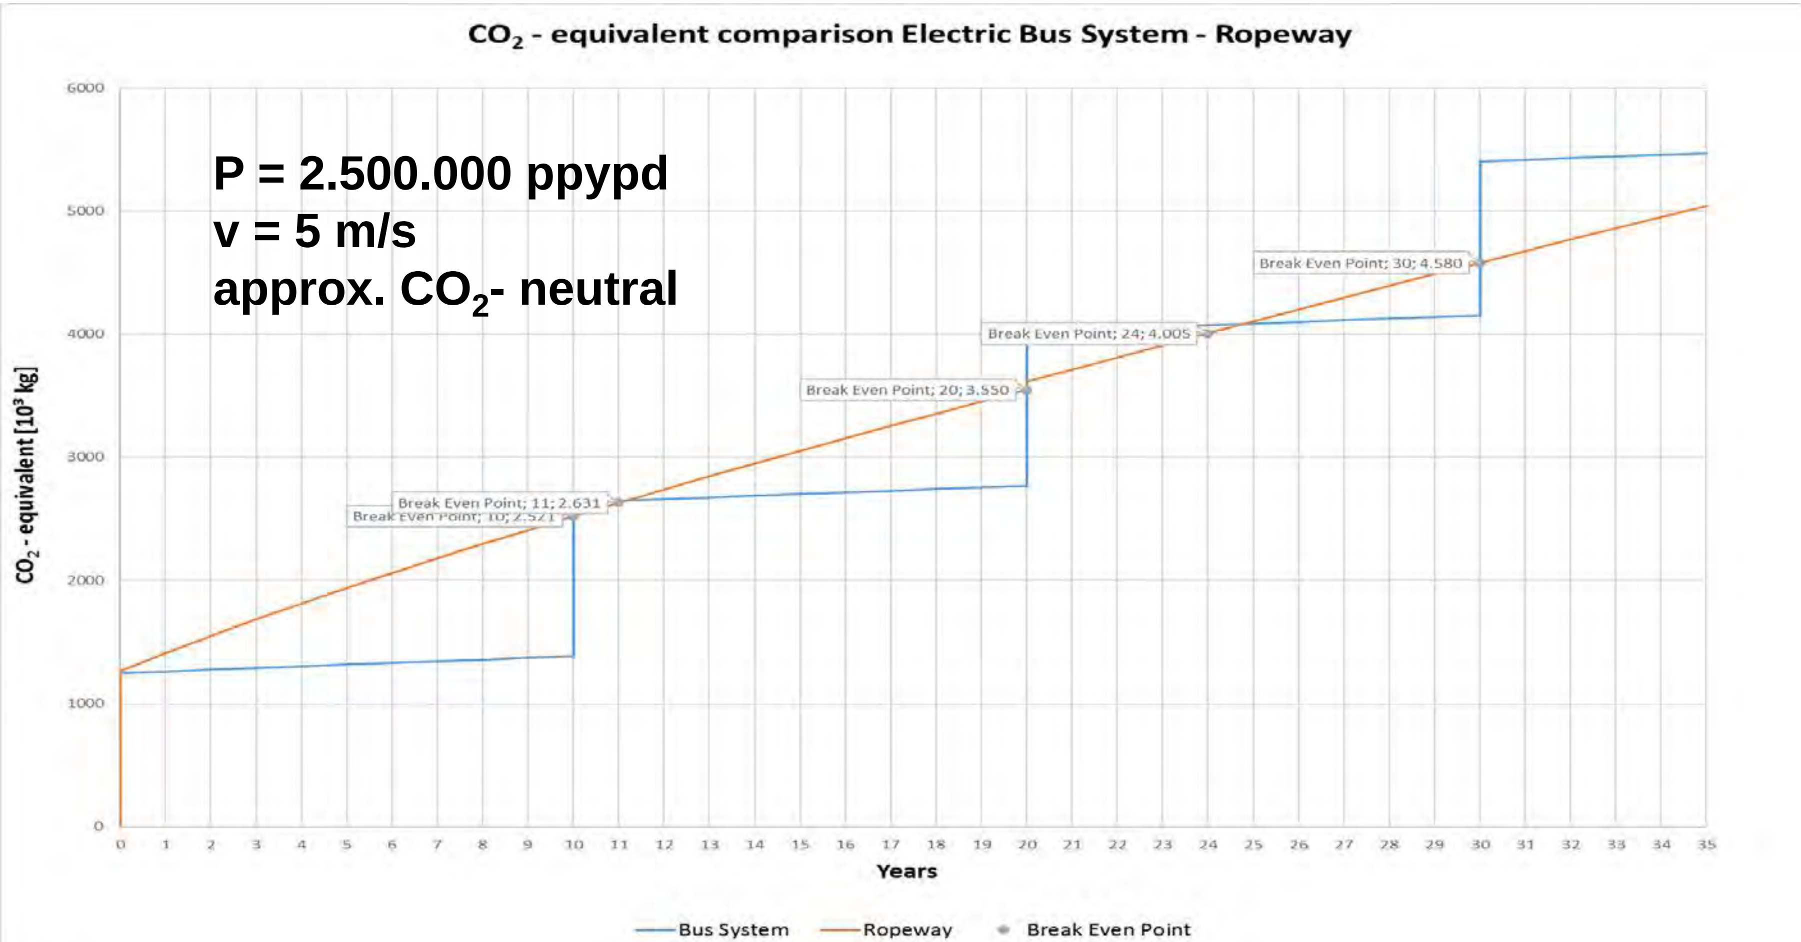


Source: BM für Verkehr und digitale Infrastruktur, 2016

⇨ Reduction CO_2 emissions of 86,5%

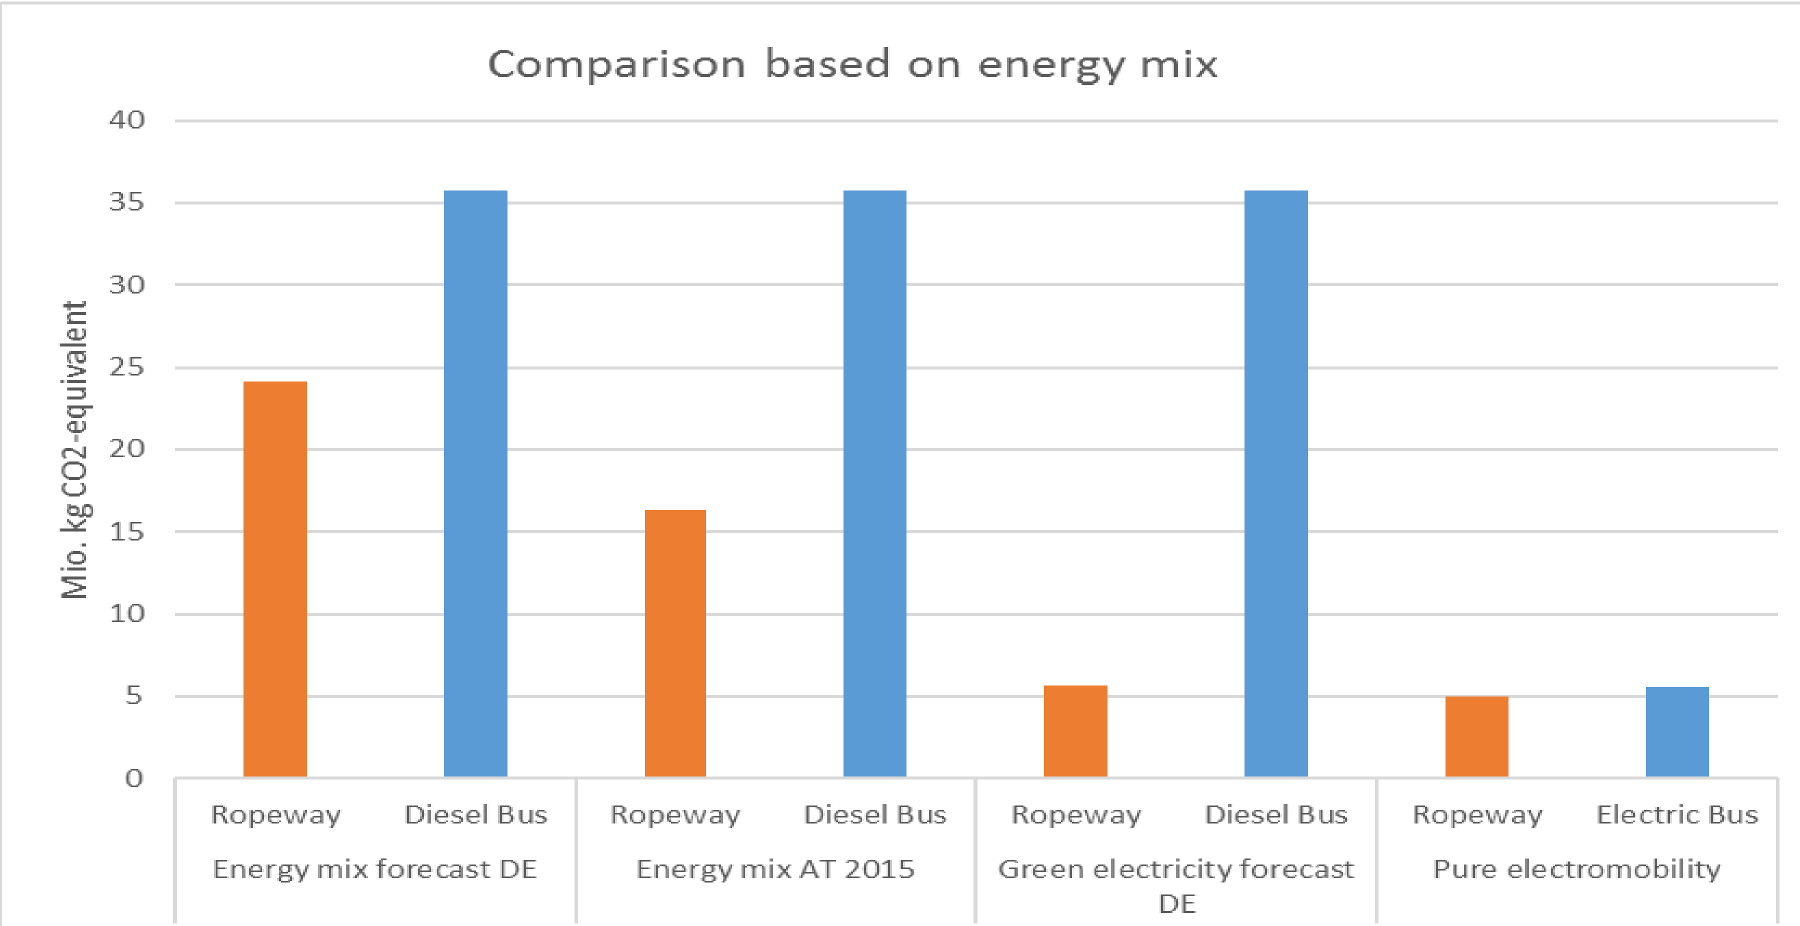
Klaus Erharter
Florian Dörfler

Example Yenimahalle – pure electromobility



Klaus Erharter
Florian Dörfler

5.9 General considerations



Klaus Erharter
Florian Dörfler

6.1 Value of a Lifecycle Assessment

External Use:

- Basis for political decision makers
- Reduction of energy consumption and environmental footprint by optimized operation (= cost reduction!)
- International acceptance due to standardized method (ISO 14040)

Internal Use:

- Marketing, Communication
- Discover energy saving potentials, Process optimization
- Design for Life Cycle, Push of Innovation
- Motivation collaborators
