SUMMARY

Service life SA III has concluded its work on the management of the service life of electrical components in cableways and published its findings in Recommendation 31. The working group has been disbanded.

Functional safety SA III has set up a working group to work on the integration the relevant standards into EN 13243. The current standard does not, amongst other things, take into account any aspects of cyber security.
According to information from representatives of CEN TC242 WG 6, a complete revision is required, to take effect from 2026.

12 January 2026 Erich Megert
